Please see material specifications here: https://7843647c-dd3d-43c2-b373-067d2addab93.filesusr.com/ugd/883b00_1621209d9cd04cb395ab8950da9c76cc.pdf

It is recommended that for systems that penetrate the ground, customers carry out a geotechnical study and pile or anchor pull-out tests to ensure that the pile or anchor is suitable for the ground conditions. For ballasted systems, it is recommended that customers carry out geotechnical studies and compression tests to ensure suitability for the ground conditions and wind loads.

Please note the system has been designed and structurally calculated to a fundamental basic UK wind velocity within the UK up to 28m/s and snow loads up to 0.8kN/m². Customer to check suitability:

Warranty:

Above-ground corrosion warranty: 10 years provided. No below-ground warranty. Extended warranties require geotechnical and atmospheric survey results presented to Solarport Systems.

For more information, please contact: Modular@Solarportsystems.com

Delivery:

Whilst the Solarport team endeavors to satisfy the customer's specified delivery date, it should be noted that such a date does not constitute a confirmed delivery date. Precise delivery dates shall be furnished subsequent to order confirmation. In accordance with Inco terms, the delivery terms shall be DAP.

Payment:

In the absence of any alternative arrangement, full payment is due at the time of placing your order.
